

ON INTERNATIONAL WOMEN'S DAY, SPOTLIGHTING 7+7 WOMEN IN ANTENNAS AND PROPAGATION

To celebrate the International Women's Day, at the IEEE Transactions on Antennas and Propagation we honor women who are paving the way in engineering sciences and within the antennas and propagation field and have contributed in transforming the field.

Diane Titz

Recipient of the 2018 IEEE Lot-Shafai Mid-Career Distinguished Achievement Award

Location

Université Nice Côte d'Azur, France

Role

Associate Researcher

Education

M.S. in Telecommunications

Ph.D. in Electrical Engineering

Research Interests

Millimeter-wave antennas, circuits and measurements

Hobbies

Tennis, ski, and piano

"I have always wanted to understand everything from the phenomena that surround us to their origins that sometimes are not primarily accessible. Throughout history that has been possible thanks to technology breakthroughs. It is then logical to me to continue in this endeavour to advance technology. The perks are that every day you get to learn new things, understand them, confront fields or associate them. This quest is unlimited and one could hope that one's contribution will serve one day."
